

Download Timelapse

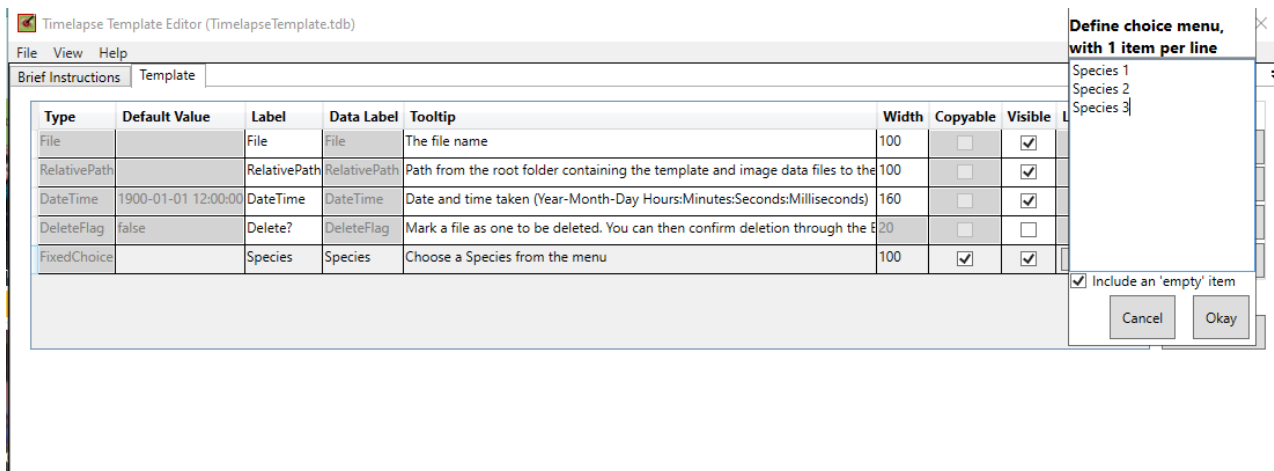

Download Link:

- [Timelapse: Download and Installation — Timelapse \(ucalgary.ca\)](#)

*You need to first create a Timelapse Template before labeling the photo.

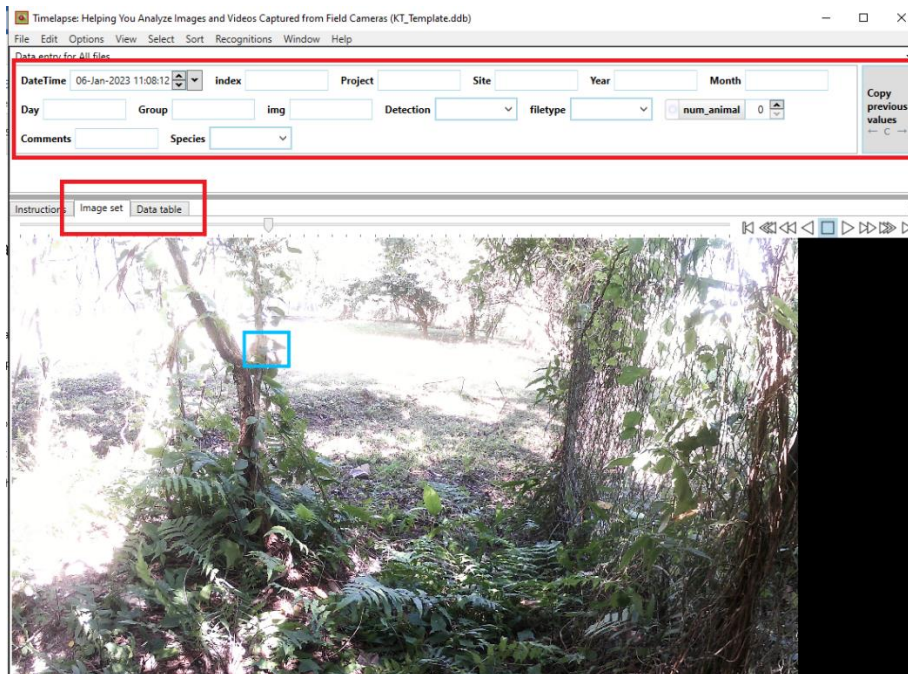

Steps to Create Timelapse Template

1. Open “Timelapse2TemplateEditor” in the Timelapse file
2. Click “File” and “New template...” to create the template.
3. **Save your template to the file that contains the cropped images. **
4. Click “Choice” under Add and change Label to Species
 - a. Click on Define List to add the species you want to label.
 - b. You can also add other labels such as “Count” to count how many animals are present in the image.
5. The template will save automatically after you close the window.

Label images in Timelapse.

1. Open “Timelapse2” in the Timelapse file.
2. Click “File template” and “Load template, images, and video files...” to open the template you created.
3. Label the images.
 - a. You can check the overview of the dataset in the Data Table tab.

4. After you finish labeling, click “File” and export data in csv file.

****Remember the image file should be in your local Disk. Otherwise timelapse could not save your progress.**
